NAME
ares_dup – Duplicate a resolver channel

SYNOPSIS
#include <ares.h>

int ares_dup(ares_channel *dest**, ares_channel** source**)**

DESCRIPTION
The **ares_dup(3)** function duplicates an existing communications channel for name service lookups. If it returns successfully, **ares_dup(3)** will set the variable pointed to by *dest* to a handle used to identify the name service channel. The caller should invoke *ares_destroy(3)* on the handle when the channel is no longer needed.

The **ares_dup_options** function also initializes a name service channel, with additional options set exactly as the *source* channel has them configured.

SEE ALSO
ares_destroy(3), ares_init(3), ares_library_init(3)

AVAILABILITY
ares_dup(3) was added in c-ares 1.6.0
